DETAILED ACTION

Prosecution on the merits of this application is reopened for the reasons indicated below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) File a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
 - (2) Request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 4, 5, 8-10, 18-20, and 73 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In *In re Wands* (8 USPQ2d 1400 (CAFC 1988)) the CAFC considered the issue of enablement in molecular biology. The CAFC summarized eight factors to be considered in a determination of "undue experimentation". These factors include: (a) the quantity of

Page 3 Application/Control Number: 09/359,181 Art Unit: 1631 experimentation necessary; (b) the amount of direction or guidance presented; (c) the presence or absence of working examples; (d) the nature of the invention; (e) the state of the prior art; (f) the relative skill of those in the art; (g) the predictability of the art; and (h) the breadth of the claims. In considering the factors for the instant claims: a) In order to practice the claimed invention one of skill in the art must be able to provide, identify, and describe molecules that exhibit a desired activity by determining molecular descriptors. This includes execution of a dynamic filtering step whereby candidate molecules are filtered using at least one dynamic filter representing constraints of conformational variations which each candidate molecule must satisfy in order to exhibit said desired activity. For the reasons discussed below, this constitutes undue experimentation. b) and c) The specification provides examples for static filtering, as described on pages 33-35. Static filter screening is known in the art, as exemplified by Krieger et al. (Chemical and Engineering News (1996) Vol.74, pp.67-73) at page 68. The specification does not, however, describe the dynamic filtering process that the Applicant deems as the novel, patentable invention. Instead, the specification states at page 17, lines 19-24: "Dynamic filtering can be carried out by means of new software designed by G. Grassy. the Multidyn software, which allows the conformational spaces at any molecules to be characterized on the basis of molecular dynamics trajectories. The bioactive conformations of the molecules in question are accordingly displayed." d) The invention is drawn to methods for dynamic filtering. However, the specification does not provide a means to do so without undue experimentation. The specifics of said software are never disclosed. e) and g) It would have been well known in the art that static filtering could be performed and is described in several US Patents. One can refer to US 5,463,564 (Agrafiotis et

Page 4

Application/Control Number: 09/359,181

Art Unit: 1631

al.) that describes a computer-implemented method to direct a combinatorial chemical library that includes a method to screen out compounds that are unsuitable. Further, US 5,025,388 (Cramer et al.) also teaches the CoMFA method which works by comparing the interaction energy descriptors of shape and relating changes in shape to differences in measured biological activity in a static way. Platt et al. (US 5,784,294) also teach a computer-based method (QSAR) for molecular descriptor that includes shape of a molecule in a static way. All have been previously referenced and are evidence that static filtering was well known in the art of molecular descriptors.

h) The claims are broad because they are drawn to filtering molecular descriptors by using a **dynamic** filter. The skilled practitioner would first turn to the instant specification for guidance to practice this method. However, the instant specification does not provide specific guidance to practice these embodiments. The instant specification merely mentions the use of a **new** software developed by one of the inventors of the instant application without describing how to use the software or the parameters that make the software function. As such, the skilled practitioner would turn to the prior art for such guidance, however, the prior art shows only the use of static filtering and there is no guidance regarding dynamic filters. Finally, said practitioner would turn to trial and error experimentation to determine the parameters need to implement a dynamic filter. Such represents undue experimentation.

No claims are allowed.

Inquiries

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located

Art Unit: 1631

in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993) (See 37 CFR § 1.6(d)). The CM1 Fax Center number is either (703) 308-4242, or (703) 308-4028.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lori A. Clow, Ph.D., whose telephone number is (703) 306-5439. The examiner can normally be reached on Monday-Friday from 10am to 6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael P. Woodward, Ph.D., can be reached on (703) 308-4028.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Legal Instrument Examiner, Tina Plunkett, whose telephone number is (703) 305-3524, or to the Technical Center receptionist whose telephone number is (703) 308-0196.
